## Contents

## 1 Introduction

```
library(photobiology)
library(photobiologyWavebands)
library(photobiologygg)
library(photobiologyInOut)
library(lubridate)
library(ggplot2)
```

```
options(dplyr.print_max = 5)
options(dplyr.print_min = 3)
```

This package defines functions for importing spectral data from different instruments (Table 1) and simulation models (Table 2).

| R function | Instrument | Program |
|---|---|---|
| read_ooss_file() | Ocean Optics spectrometers | SpectraSuite |
| read_oojaz_file() | Ocean Optics Jaz | *instrument* |
| read_macam_file() | Macam | *instrument* |
| read_licor_file() | LI-COR LI-1800 | PC1800 (MS-DOS) |

Table 1: Functions for importing measured spectral emission data

| R function | Simulation model | version |
|---|---|---|
| read_tuv_file() | TUV (Sasha Madronich) | version 5.0 (modified) |
| read_tuv_file() | TUV (Sasha Madronich) | edited output |

Table 2: Functions for importing simualted spectral data from models

## 2 Examples

Reading a file geenrated by Ocean Optics' Jaz spectrometer.

```
jaz.spct <- read_oojaz_file(file = "spectrum.JazIrrad")

## Warning in range_check(x, strict.range = strict.range):  Negative spectral energy
irradiance values; minimun s.e.irrad = -0.032
```

Photon and energy irradiances.

```
q_irrad(jaz.spct, PAR()) * 1e6 # umol m-2 s-1

##      PAR
## 47.43464
## attr(,"time.unit")
## [1] "second"
## attr(,"radiation.unit")
## [1] "photon irradiance total"

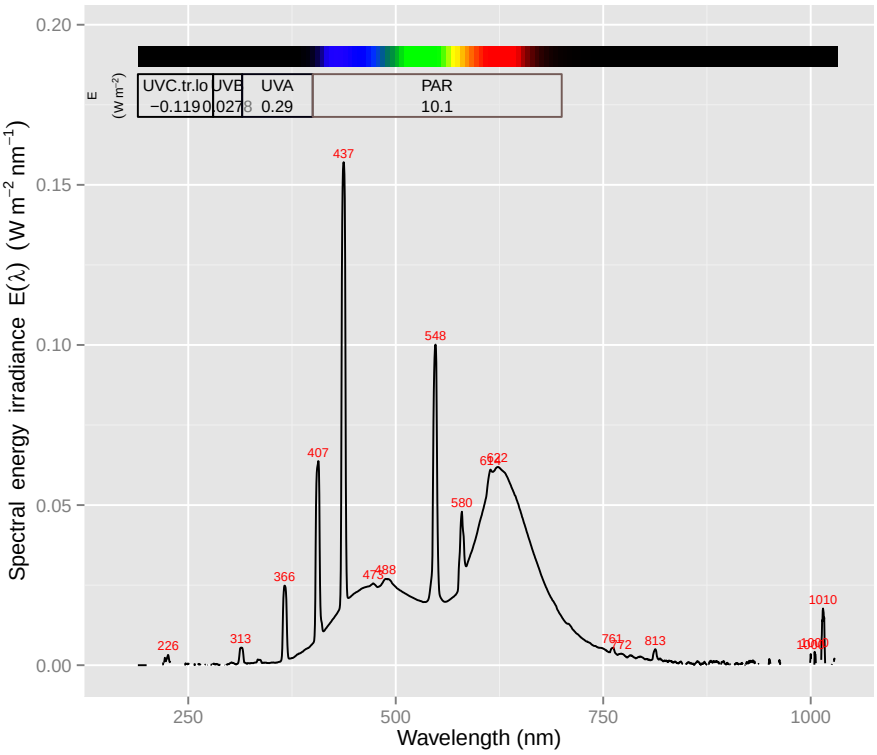
e_irrad(jaz.spct, PAR())       # W m-2

##      PAR
## 10.12685
## attr(,"time.unit")
## [1] "second"
## attr(,"radiation.unit")
## [1] "energy irradiance total"
```

Plotting the spectrum.

```
plot(jaz.spct)

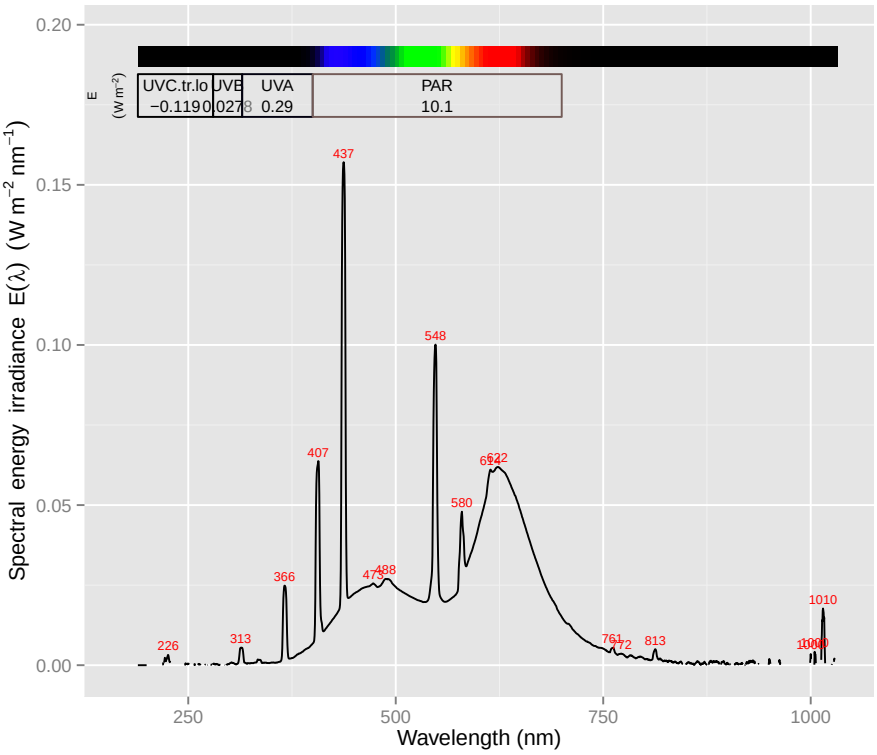
## Warning in range_check(x, strict.range = strict.range):  Negative spectral energy
irradiance values; minimun s.e.irrad = -0.032
## Warning in range_check(x, strict.range = strict.range):  Negative spectral energy
irradiance values; minimun s.e.irrad = -0.032
## Warning:  Removed 1 rows containing missing values (geom_path).
```



All in one statement.

```
plot(read_oojaz_file(file = "spectrum.JazIrrad"))

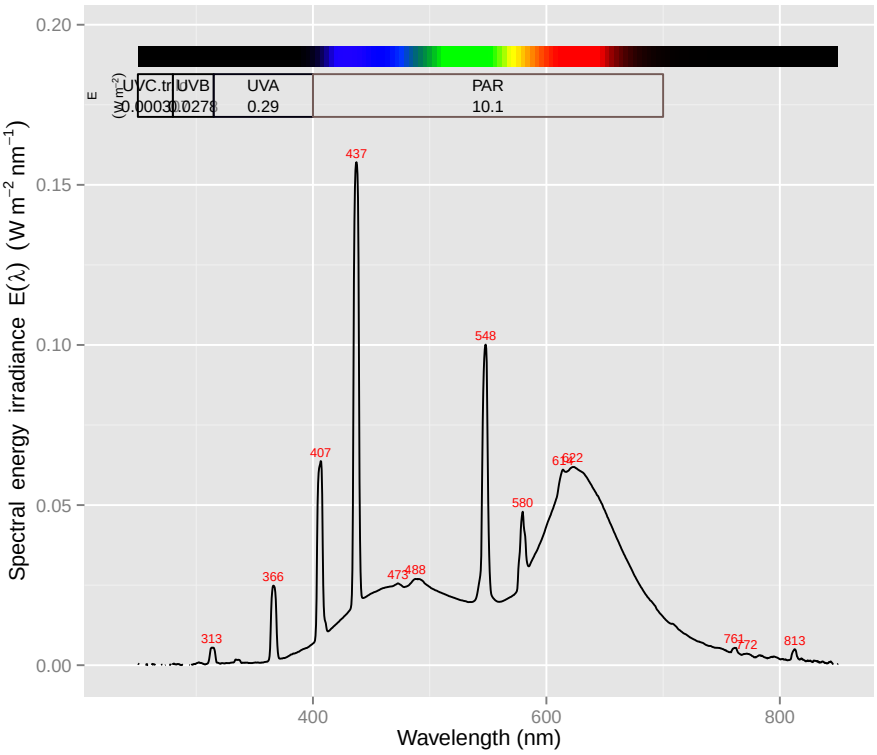
## Warning in range_check(x, strict.range = strict.range):  Negative spectral energy
irradiance values; minimun s.e.irrad = -0.032
## Warning in range_check(x, strict.range = strict.range):  Negative spectral energy
irradiance values; minimun s.e.irrad = -0.032
## Warning in range_check(x, strict.range = strict.range):  Negative spectral energy
irradiance values; minimun s.e.irrad = -0.032
## Warning:  Removed 1 rows containing missing values (geom_path).
```



As above but limiting the wavelength range plotted.

```
plot(read_oojaz_file(file = "spectrum.JazIrrad"), range = c(250,850))

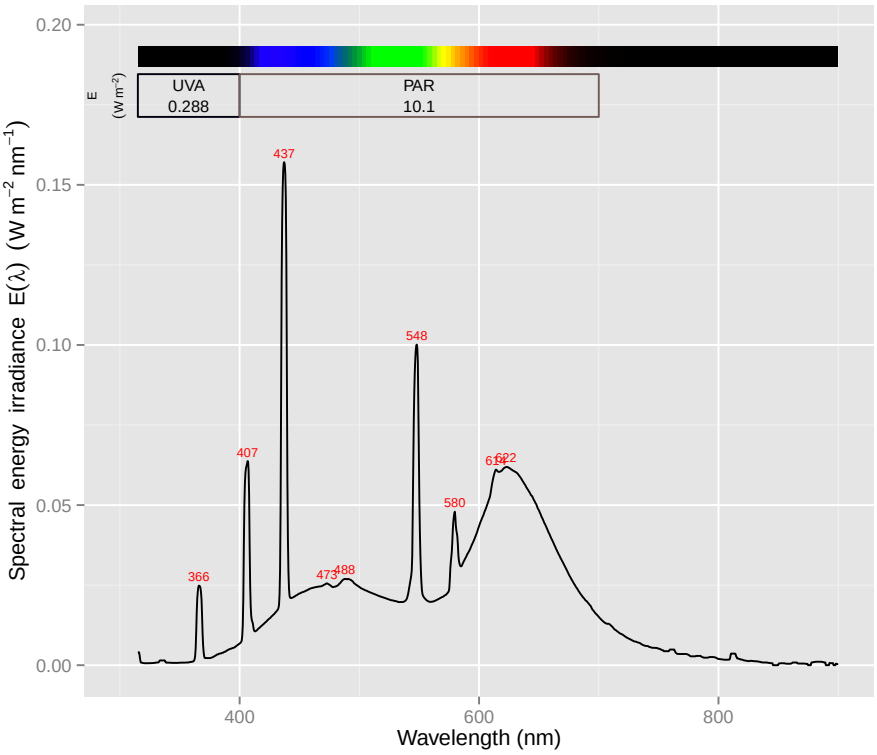
## Warning in range_check(x, strict.range = strict.range):  Negative spectral energy
irradiance values; minimun s.e.irrad = -0.032
## Warning in range_check(x, strict.range = strict.range):  Negative spectral energy
irradiance values; minimun s.e.irrad = -0.032
## Warning in range_check(x, strict.range = strict.range):  Negative spectral energy
irradiance values; minimun s.e.irrad = -0.00044
## Warning in range_check(x, strict.range = strict.range):  Negative spectral energy
irradiance values; minimun s.e.irrad = -0.00044
## Warning in range_check(x, strict.range = strict.range):  Negative spectral energy
irradiance values; minimun s.e.irrad = -0.00044
```



Adding our custom "adaptive" smoothing.

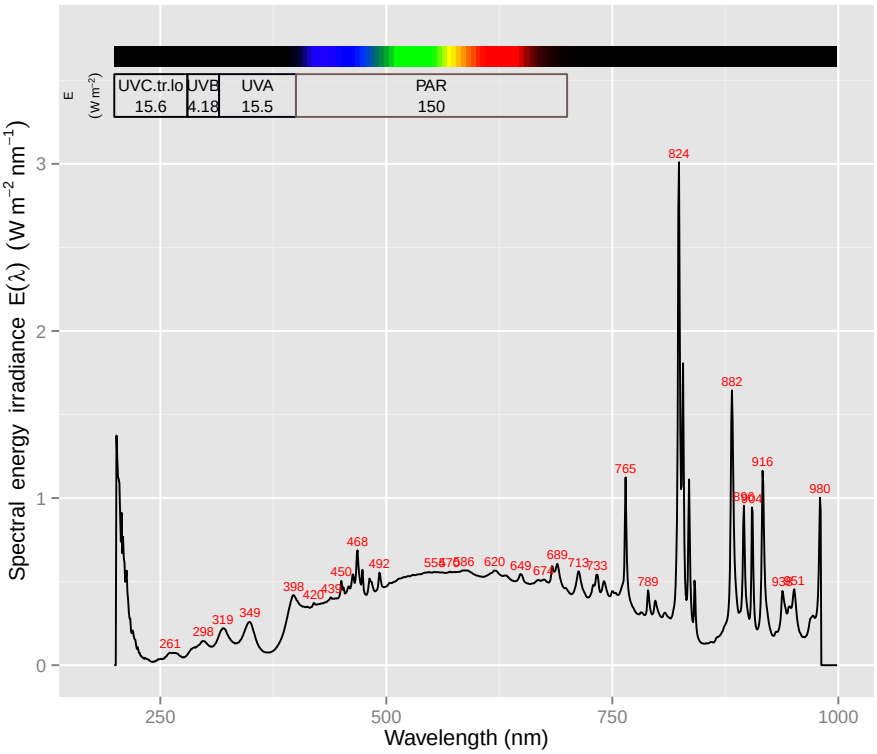
```
plot(smooth_spct(read_oojaz_file(file = "spectrum.JazIrrad")), range = c(315,900))

## Warning in range_check(x, strict.range = strict.range):  Negative spectral energy
irradiance values; minimun s.e.irrad = -0.032
## Warning in smooth_spct.source_spct(read_oojaz_file(file = "spectrum.JazIrrad")):
89 'bad' estimates in spectral irradiance
## Warning in range_check(x, strict.range = strict.range):  Negative spectral energy
irradiance values; minimun s.e.irrad = -0.027
## Warning in range_check(x, strict.range = strict.range):  Negative spectral energy
irradiance values; minimun s.e.irrad = -0.027
```



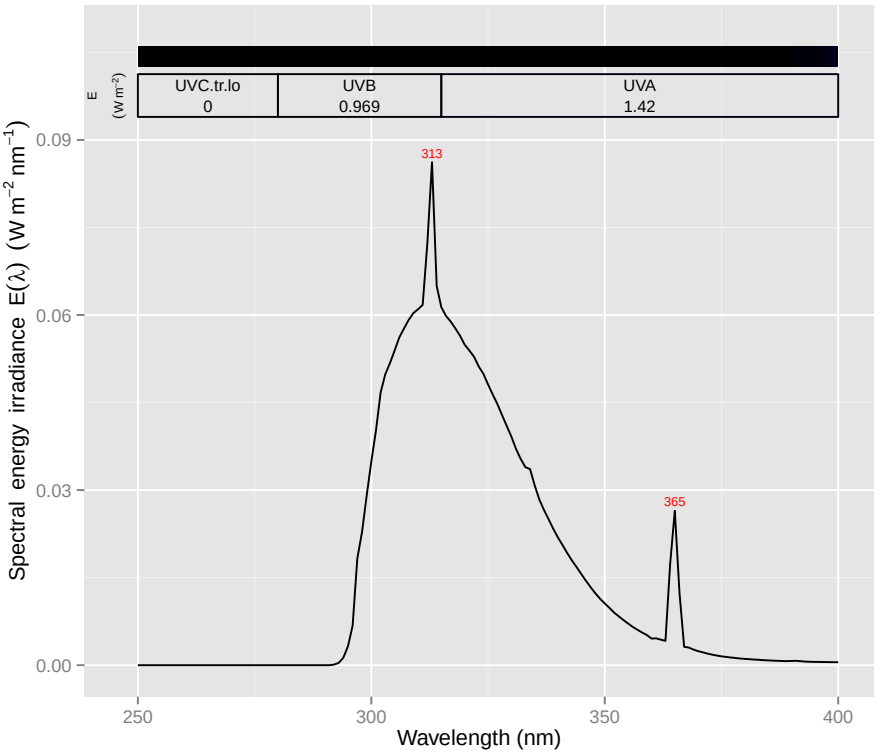
Now a file from an Ocean Optics' Q6500? spectrometer.

```
plot(read_ooss_file(file = "spectrum.SSIrrad"))
```



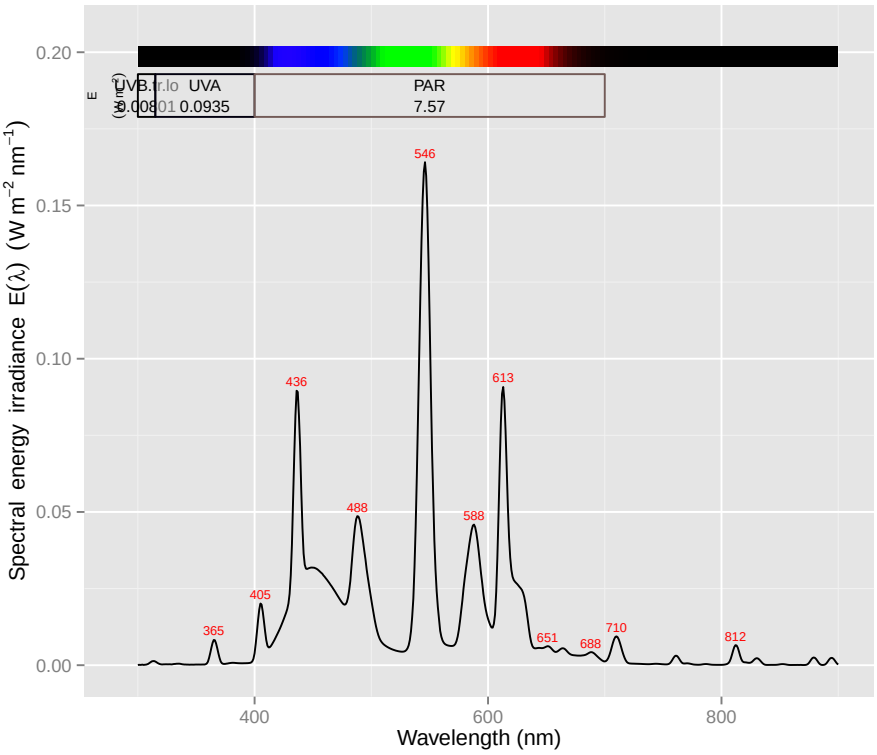
Macam's single column DTA files can also be imported.

```
plot(read_macam_file(file = "spectrum.DTA"))
```



And a file generated by LI-COR's PC1800 program for the LI-1800 sepctro-radiometer.

```
plot(read_licor_file(file = "spectrum.PRN"))
```



In all cases as much information as possible is decoed, and the data file headers are preserved as comments in the source.spct objects.

```
cat(comment(jaz.spct))

## Ocean Optics:
## Jaz Absolute Irradiance File
## ++++++++++++++++++++++++++++++++++
## Date: Tue Feb 03 09:44:41 2015

## ..      ...       ...                 ...
```

The output from the TUV model can be imported either by editing it before import, or by making a simple edit to the output routine of TUV. This function is known to work with TUV version 5.0 output. The output from TUV can contain a variable number of spectra in "parallel" columns, which are *melted* into a single column, with a factor with letter as levels, a numeric variable with the zenith angle and a POSIXct column with times. A date needs to be always supplied as the output file from TUV has only time of day information.

```
tuv.spct <- read_tuv_file(file = "usrout.txt", date = ymd("2014-03-21"))
summary(subset(tuv.spct, spct.idx == "A"))

## wavelength ranges from 280.5 to 761.5 nm
## largest wavelength step size is 1 nm
## spectral irradiance ranges from 3.041e-15 to 1.947 W m-2 nm-1
## energy irradiance is 636.7 W m-2

tuv.spct

## Object: source_spct [3,856 x 5]
## Wavelength (nm): range 280.5 to 761.5, step -481 to 1
## Time unit: 1s
##
##    w.length spct.idx s.e.irrad angle               date
##       (dbl)   (fctr)     (dbl) (dbl)             (time)

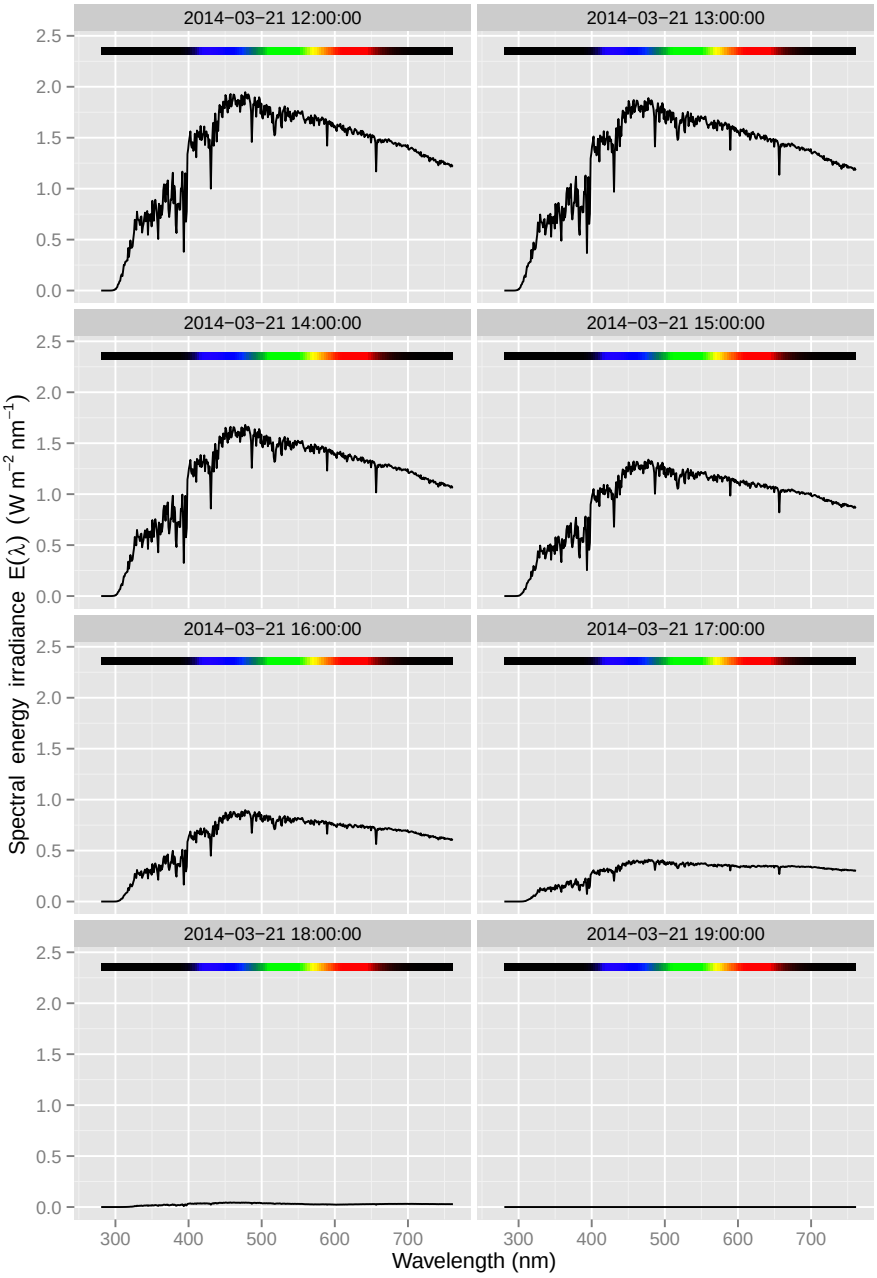
## 3     282.5        A 1.824e-12 1.829 2014-03-21 12:00:00
## ..      ...      ...       ...   ...                 ...
```

It is possible to extract individual spectra with subset, or as done here plot them in different panels.

```
plot(tuv.spct, annotations = c("colour.guide")) +
  facet_wrap(~date, ncol = 2)
```



The output is a single `source_spct` object that can be easily converted into a `source_mspct` object containing the individual spectra as members of the

collection.

```
tuv.mspct <- subset2mspct(tuv.spct)
tuv.mspct
